Week 06: Box Model & Information Hunter

Foundations of CSS Layout & Data Structuring Strategies

Web Programming (E-Track)

CORE LEARNING OBJECTIVES

Box Model Mastery

Understand the physical structure of Margin, Border, and Padding.

Information Hunter

Master advanced Google operators to find answers in seconds.

Data Expertise

Summarize multi-dimensional data using Pivot Tables efficiently.

EVERYTHING IS A "BOX"

Break Your Stereotypes

To a computer, every element on a web page is a **rectangular box**, regardless of its visual shape.

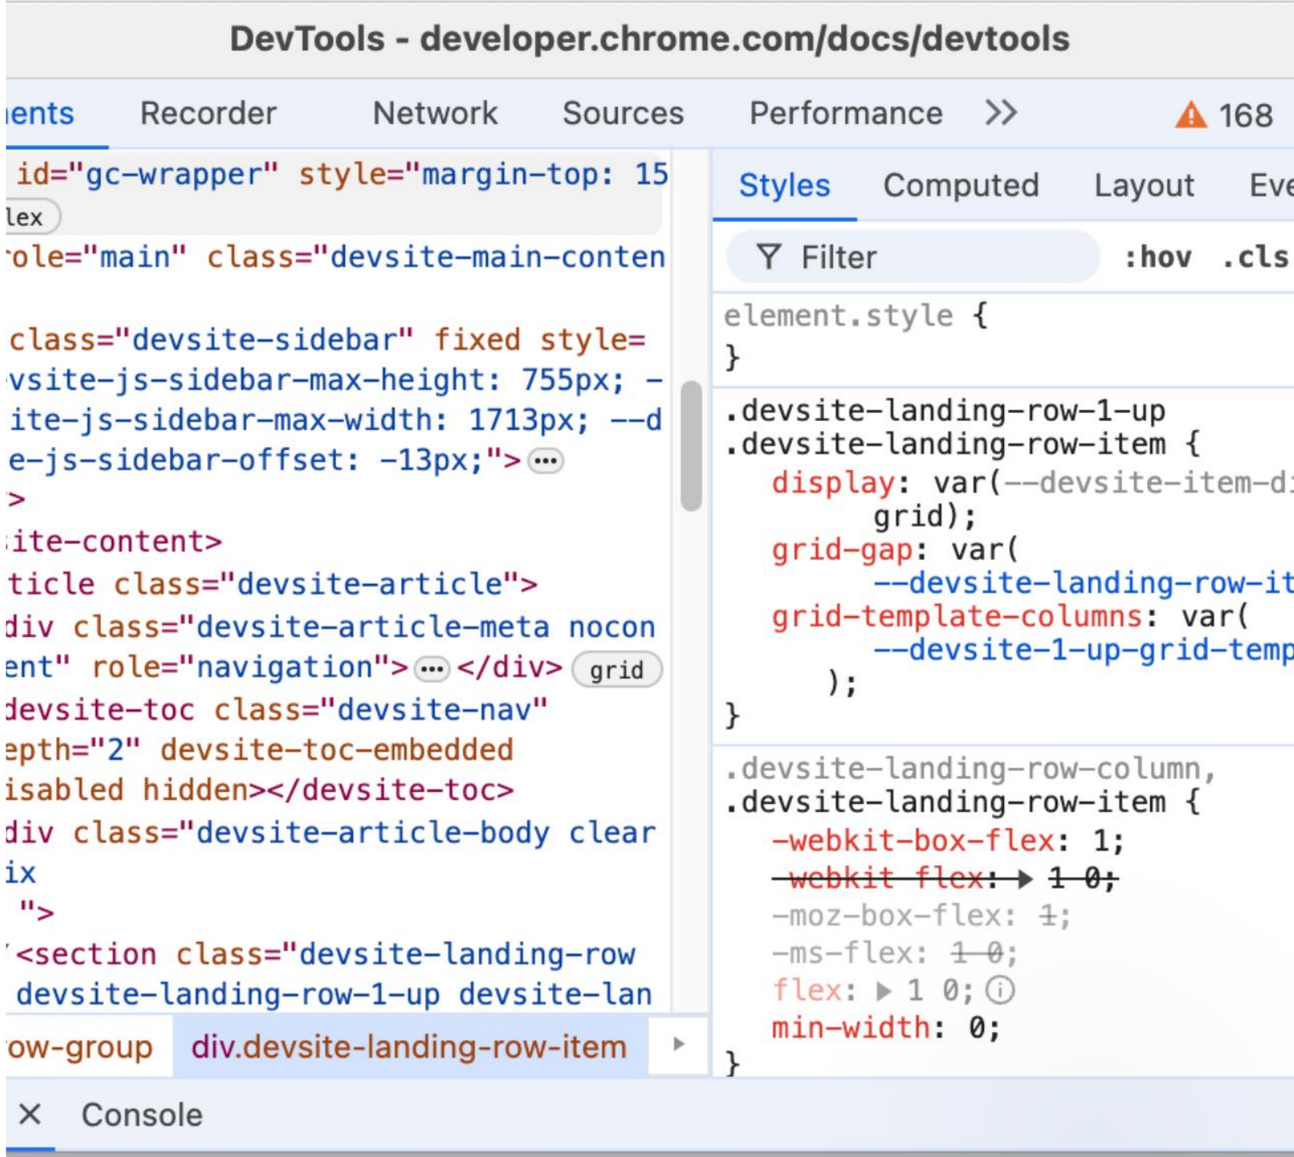
- Layout is the arrangement of these boxes.
- The hierarchy: Content > Padding > Border > Margin.
- Mastering these gaps is the key to professional UI design.

THE DELIVERY BOX ANALOGY

- **Content**: The actual item inside (Text/Image).
- **Padding**: The **Bubble Wrap** (Internal space between content and wall).
- **Border**: The **Cardboard Box** wall (The physical boundary line).
- **Margin**: **Social Distancing** (External space from the next box).

SECRET TOOL: DEVTOOLS (F12)

- **Inspect**: Hover to see color-coded layout areas.
- **Blue**: Content Area
- **Green**: Padding (Bubble wrap)
- **Orange**: Margin (Social distancing)
- **Computed Tab**: Verify the final dimensions calculated by the browser.



LAYOUT SOLVER: BORDER-BOX

100%

Essential Declaration

Stop the Box Growth

By default, adding padding or borders makes your box wider than the defined width. This breaks layouts.

```
* { box-sizing: border-box; }
```

This forces the border and padding to be included *inside* the defined width, ensuring precision.

ADVANCED SEARCH OPERATORS

Exclusion (-)

Exclude unwanted words.

`CSS Box Model -ads`

Source (site:)

Search within specific domains.

`box-sizing site:mdn.io`

File (filetype:)

Find specific file types.

`web trends filetype:pdf`

DATA IMPORTING FOUNDATIONS

Method	Technique	Key Benefit
Plain Table Copy	Ctrl + Shift + V	Pastes raw values only, removing messy web styles.
CSV Import	Detect automatically	Converts massive text chunks into structured columns instantly.
Excel Compatibility	Open with Google Sheets	Maintains formulas and cloud-syncs local documents.

VISUAL DATA STRUCTURING

Freeze & Sort

Lock headers using **Freeze Panes** so you never lose track of categories.

Use **Sort Sheet** to build leaderboards or find extremes (Min/Max) in seconds.

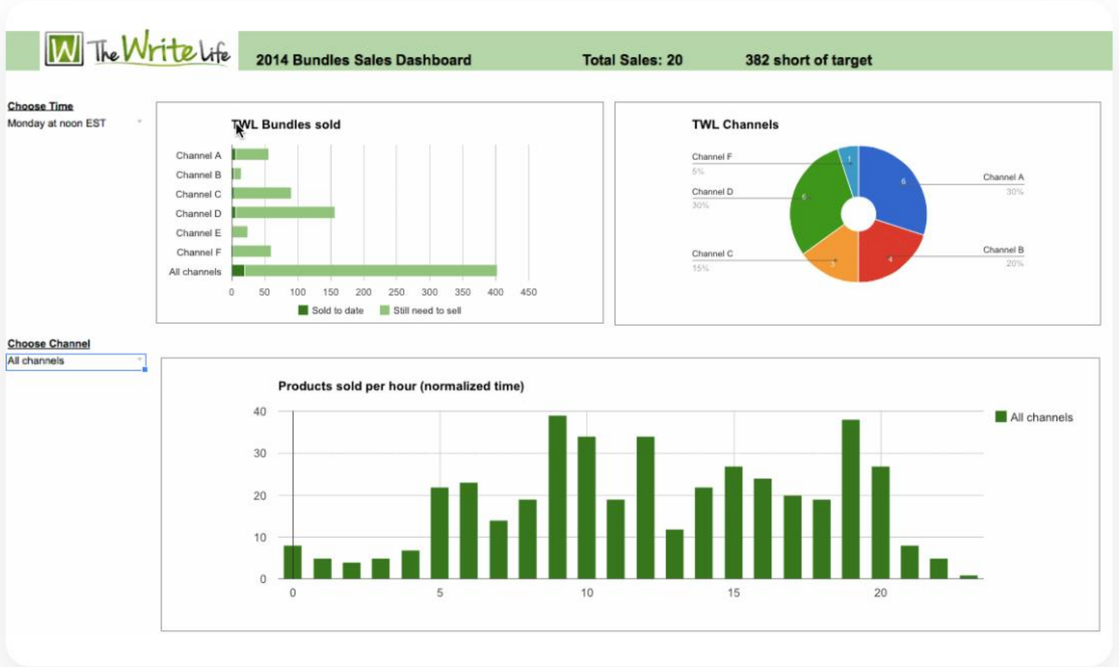
Conditional Formatting

Apply **Color Scales** like a thermal camera.

Visualize density and outliers without writing a single function or complex chart.

*"Smart Tip: Use **Flash Fill** to extract patterns from text automatically."*

PIVOT TABLE ANALYSIS



Summarize with Clicks

Instant derivations of Sum, Average, or Median from massive raw data.

- Drag data to 'Values' area.
- Create **Cross-Tabulations** (e.g., Sales by Region vs. Category).
- Turn "hunted" data into actionable insights.

BUILD-UP MISSION

Load

Open Week 05 code in StackBlitz.

Space

Add padding & border to .card.

Align

Fix stuck buttons with margin-right.

Hunt

Find raw data using operators.

Analyze

Create a Pivot Table in Sheets.

Questions?

Master the Box, Hunt the Truth.

CSS Mastery

Data Power
